

Steve Mooney, R00LM012868 grant, 50% RA Autumn Qtr., 9/16-12/15/2021

Looking for a 50% FTE RA to help on a project using 'big data' approaches to explore contextual determinants of physical activity and obesity. The RA will be responsible for analyses that leverage the 'Automatic Context Measurement Tool' to compile hundreds of contextual measures and to use computational approaches that scale to large datasets to conduct hypothesis-free -WAS type analyses. These analyses should result in both substantive and methods papers, to be led by the RA as appropriate. The current position is for fall quarter with the possibility of extending through the academic year.
