

# THE WORLD NEEDS EPIDEMIOLOGY

## LOCAL LEADER FOR GLOBAL EPIDEMIOLOGY

Since the 1960's, UW has pioneered the science of epidemiology. UW revolutionized cancer epidemiology, shaped national food safety policy, advanced global HIV prevention, and helped end the COVID-19 pandemic.

Our pioneering legacy continues today. As the Pacific Northwest's only epidemiology training, research, and practice powerhouse, we are the trusted partner to governments, nonprofits, businesses and industries at home and abroad.

## FACING A PIVOTAL MOMENT

UW Epidemiology is helping end cancer, making food safer and healthier, reducing diabetes, preventing workplace injuries, protecting health from climate disasters, and much more.

We are addressing the urgent health issues of our time, but our progress is at risk. Drastic cuts to health research and funding threaten the health, safety, and prosperity of our communities, nation, and world.

## HELP PEOPLE LIVE LONGER AND BETTER

Your philanthropy empowers the careers and research that help people live longer and better. By supporting UW Epidemiology, you can:

- Accelerate research that improves daily lives
- Help students innovate new health strategies
- Ensure that UW, Washington and the U.S. continue to be the home for world-class epidemiologists

## WAYS TO SUPPORT UW EPIDEMIOLOGY

- **Endowed Fellowships or Professorships** to support students and leading faculty now and in the future.
- **Term Fellowships or Professorships** provide students and faculty predictable support for 3-5 years.
- **Annual Fund Gifts** of any amount strengthen priority areas within the department.
- **Planned Giving** offers opportunities for lasting impact, including tax-wise gifts from retirement accounts.
